Prerequisites	03
Chapter 1   Install the application	03
Chapter 2   Unlocking the SSD	05
Chapter 3   Possible Error Scenarios	07

## Prerequisites

- The X-PHY must be set up with the X-PHY Utility Tool. A Guide can be Referenced to [here](#)
- Ensure that the Bluetooth module on the Android Device (Tablet/Mobile) is functional.
- Ensure that the android device is on Android 6.0 and above.
- Ensure the X-PHY is powered on and is within a 10 meter range.

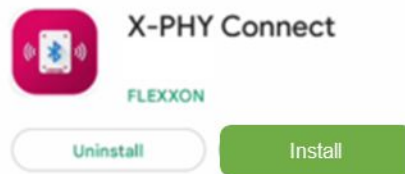

The official X-PHY connect application should ONLY be obtained from the official Google Play Store. Kindly Ensure that any form of installation of the X-PHY Connect Application should be installed on a trusted Android Mobile Device only.

## Chapter 1: Install the application

1. Visit Google Play Store (Figure 1) & Search for the X-PHY® Connect (Figure 2).

(Figure 1)

(Figure 2)

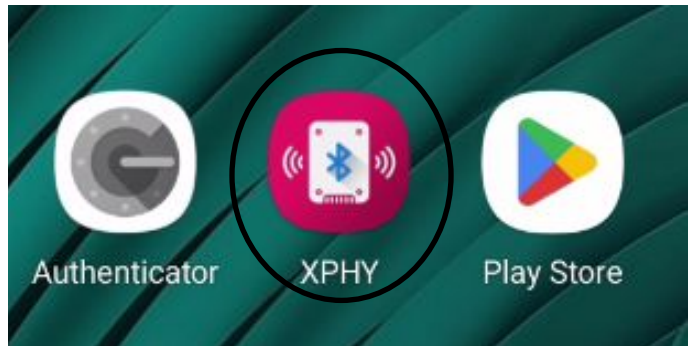

2. X-PHY® Connect can be found in the Google Play Store by scanning the QR code.

## Chapter 2: Unlocking the X-PHY SSD

### Detect and Launch the application

Locate the application on the local android mobile device and click on it to launch the application

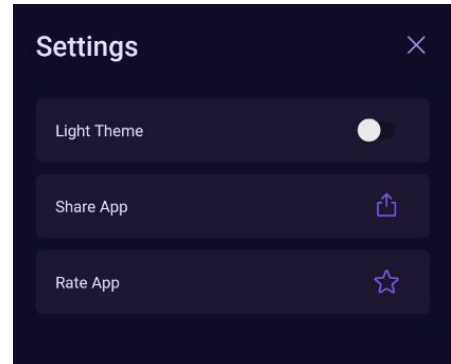

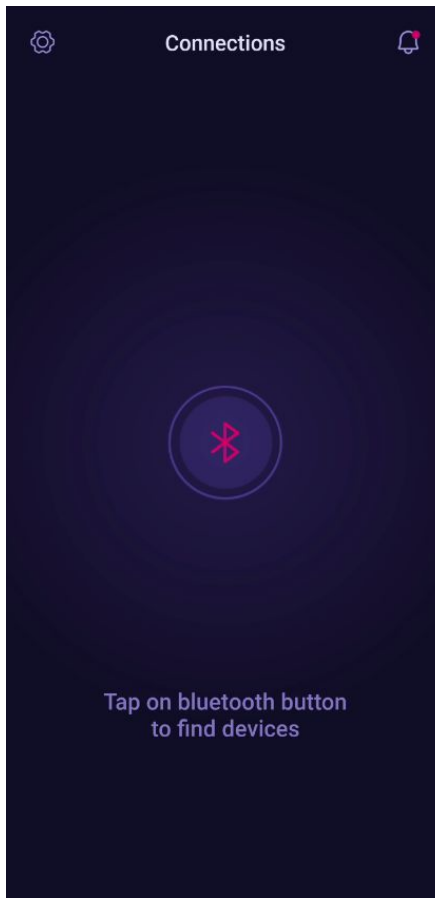

## Quick Introduction

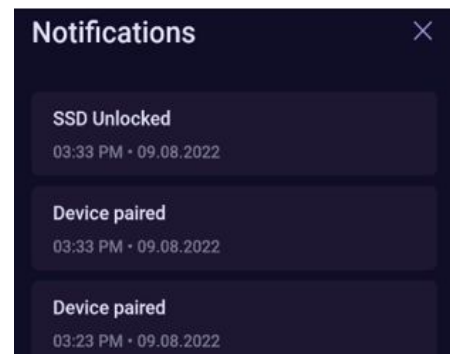

### Settings Icon

- The user can change the theme of the X-PHY connect application
- Share the application
- Rate the application

### Notification Icon

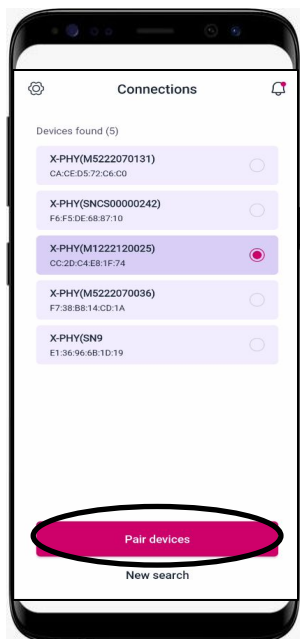

- The user can see all the happenings of the SSD on the application

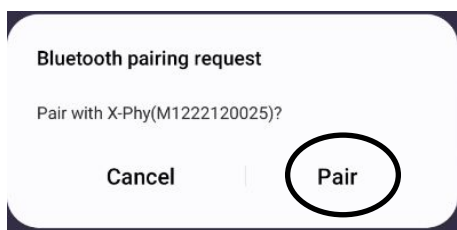

## Scanning For X-PHY SSD's

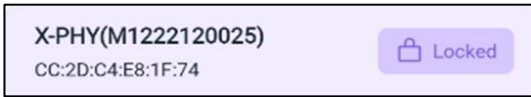

Step 1: Click on the Bluetooth logo to start scanning for devices in the area

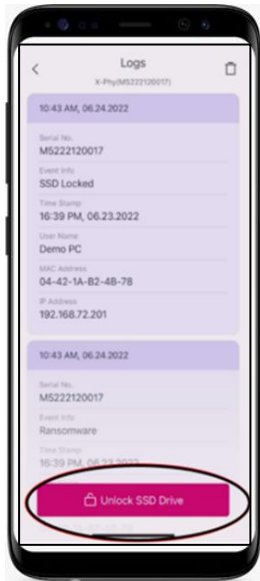

Step 2: Once detected, select the relevant SSD by the serial number and click on the pair devices button.

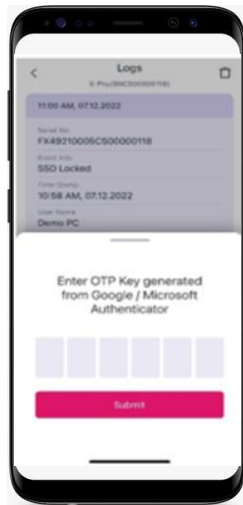

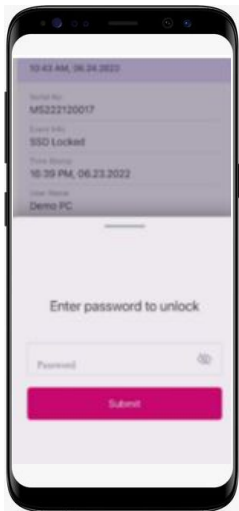

Step 3. Click on the Pair button once again.

Step 4: Upon successful pairing there will be a locked description. Tap on the locked drive button.

Step 5: The android mobile events log will be expected. Proceed to click on the unlock SSD drive button. (note: this event log shows the drive activities)

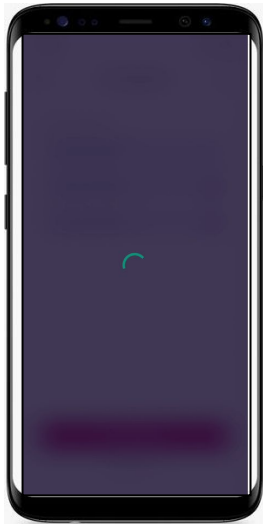

Step 6: The application will prompt the user for the individuals password and OTP

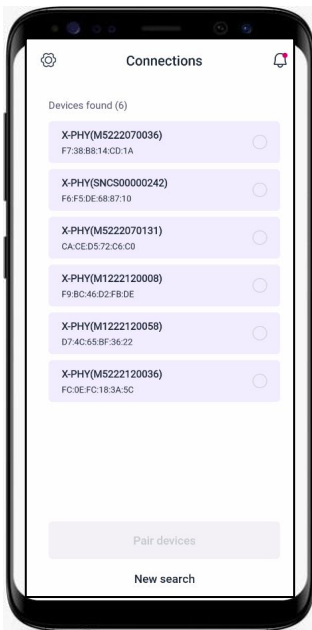

Step 7: Upon Successful Password and authentication OTP, a green unlock button will be observed

## Chapter 3: Possible Error Scenarios

An infinite loading circle. This means that the android mobile device has ran into an error connecting to the X-PHY.

To fix: Simply close the application and re-launch it

Unresponsive application. This means that the application has crashed. The user should close the app

To fix: The user should force close the application and reopen it.
